

Git

创建仓库

git init

git remote add origin XXXgit remote -v

git status红色

撤销操作

git rm --cached XXX.xxgit restore XXXgit restore --stage XXXgit commit -m""

git add

git status绿色

git commit -m "日志的内容"

git status (nothing to commit)

git push -u origin master

版本控制

git reset --hard (commit id)git reset --hard HEAD

git log--pretty=oneline

git reflog

[rejected] master -> master (fetch first)

git branch XXgit switch -c XXgit switch XXgit branchgit branch -d XXgit merge XXgit merge --no-ff -m "merge with no-ff" devgit log --graphgit --abbrev-commitgit log --graph --pretty=oneline --abbrev-commit

创建分支解决紧急情况

git stashgit stash listgit stash apply stash@{X}git stash drop stash@{X}git cherry-pick comit idgit stash pop

拉取库中的文件

git branch --set-upstream-to=origin/dev devgit pull

跟新本地库

git fetch origin mastergit loggit log -pgit log -p master.. origin/mastergit merge origin/master
